NOT JUST ANOTHER TREADMILL

THE TUFF TREAD *DIFFERENCE*

UNDER THE HOOD

Patented Force Multiplier takes the heavy flywheel off the end of the motor and mounts it between two sets of ball bearings. (Patent # 6,045,490). This creates the inertia to move the belt at a smooth and constant speed. No hesitation on foot-plant, and no bogging down under heavier loads. Runs Cooler, Lasts Longer.

FRAME

Heavy duty all Steel Frame, hood and components, Incredibly durable, supports user weights up to 700 pounds!

ROLLER

Opti-Roll Rollers are custom manufactured to maximize the optimum ratio between the inner shaft and outer roller, providing optimal support for the bearings. This large inner shaft results in longer bearing life, and has been proven over many miles and many years with very few failures. Time has proven the amazing durability of our rollers.

DECK

NO Maintenance Reversible Super Deck is built with an incredible 13 LAYERS of Ultra Dense Russian Birch Wood and Eucalyptus Hard Wood. The outer layers of Eucalyptus Hard Wood offer unique physical properties which allow us to use a special sealant and self-lubricating Polyethylene Resin Coating System which is applied through an extremely high heat process, providing a finished deck coating that has extended life, an extended lubrication factor, and an ultra low friction coefficient similar to a Teflon coating.

BELT

The Innovative Weave design of the walking belt reduces noise and dissipates heat to improve the life of the belt and deck. The seam is ultra Sonic welded for superior durability. It is rated for 40,000 miles of usage.
