

## **Who we are:**

Founded in 2020, GeoSpear Disinfecting Services, LLC combines **three decades of service industry expertise**, specifically in those areas that require complex systems management and a large labor force. GeoSpears's major experience areas include disinfecting and Anti-Microbial protection services (including Production sets, medical environments, residential/commercial high-rise buildings), as well as various mixed-use developments. GeoSpear also built efficient systems for dealing with large scale automotive dealership groups.

## **Company Profile:**

GeoSpear Disinfecting Services operates in 7 of the 10 largest markets in the United States. GeoSpear continues to be uniquely positioned to re-purpose its well-trained team members and skilled leadership to meet the emerging needs of COVID-19 disinfecting services. By utilizing GeoSpear's business platform and management systems, GeoSpear Disinfecting Services has been very successful in launching a national brand, known for outstanding customer service, a state-of-the-art disinfection process and a firm commitment to bringing value to the communities we serve.

## **What we do & how we do it:**

GeoSpear offers a multistep process that disinfects, protects, and ultimately provides peace of mind. Below is a quick breakdown of each step.

**Step 1: Disinfect.** We first apply our EPA Registered Hospital Grade disinfectant that eliminates 99.999% of pathogens on every surface to which it is applied. Our disinfectant is on the EPA's List N of Registered Products for use against emerging pathogens (including SARS-CoV-2, the virus that causes Covid-19). It is also on the EPA's List G for Registered Antimicrobial products for use against the Norovirus (which is a non-enveloped virus), and the EPA's List G for Registered Antimicrobial products for use against the Ebola (which is an enveloped virus). Non-enveloped viruses are typically more difficult to eliminate, and this speaks to the amazing efficacy of the product we use. It is also extremely safe (no VOC's) and is a "no rinse/no wipe" process.

**Step 2. Protect.** After the surfaces are disinfected, we then apply an EPA Registered micro-biostatic agent that forms a covalent bond with the surfaces to which it is applied. This produces a protective barrier of trillions of microscopic "*spears*" that protects the surface from pathogens. This provides long-term antimicrobial protection for between 30-90 days.

## **Who we Serve:**

Since launching, GeoSpear has serviced countless clients including Production companies serving A&E, NBC, and many large luxury car dealerships. Additionally, GeoSpear was awarded a very large municipal contract to service nearly 300 facilities including this municipalities' airport, police and fire stations, courthouses, municipal offices/buildings and libraries. GeoSpear will provide both proactive cleaning services as well as 24/7 COVID-19 remediation services.

An experienced leadership team, innovative business systems and a footprint in the Texas market make GeoSpear Disinfecting Services an outstanding choice for the needs any production.

Thank you for your consideration,

Michael Burka
